

REMUSHEALTH™
A NEW DAWN FOR HUMANITY

REMUSHEALTH™
A NEW DAWN FOR HUMANITY

THE VISION

“.....At Remus Corporation we believe access to healthcare should be a basic human right and not solely a luxury item for the economically affluent. In 2019 healthcare and education remain unattainable luxury items for more than 40% of the world’s population. Malaria, Cholera, Typhoid, all treatable diseases, remain fatal ailments in many developing countries, with young children being the most susceptible and exposed. The current model for healthcare simply cannot meet the needs of the most vulnerable. It is time for change. Remus has developed the first “turn key” healthcare solution and received preliminary presidential approval in 2 developing countries. Our programme will target 30 countries over the next 20 years, reaching over 400 million people who desperately need access to basic healthcare. This represents 5% of the world’s population. This programme will fundamentally change the world of healthcare putting healthcare in the hands of users not large institutions and vested interests. Join us in this journey and help make a difference to the lives of those less fortunate than ourselves.....”

Sath Kanagarajah – CEO Remus Corporation

**“We make a living by what we earn,
we make a life by what we give...”**

THE PROBLEM

- * Based on published data from the IMF and WHO nearly 40% of the world's population does not have access to healthcare as of December 2016, representing circa 3.2 billion people.
- * National Governments of Developing Countries do not have the financial and technical resources to provide healthcare to the vast majority of their populations. Only the rich who can pay for healthcare get access in these countries.
- * In Africa alone more than 85% of the population, circa 1.2 billion people do not have access to any form of healthcare at all. A child dies in Africa every 3 minutes from Malaria, Typhoid or Cholera, all treatable diseases.
- * The problem is growing annually at a rate of 2.5% according to data published by the WHO.
- * Political desire to address these challenges is virtually nonexistent in the majority of developing countries.
- * The level of healthcare in developing countries has remained at the same level as that seen in the 19th Century in developed countries, with very little sign of change or improvement.

“He, like many children his age, needs your help to live a safe and healthy life, a basic human right. Together we can make that happen and we will”

THE SOLUTION

GNHS stands for Global – National Healthcare Service and refers to the “turn key” health service programme designed by industry experts at Remus Corporation. The programme combines physical healthcare delivery through Smart Healthcare cities, with online healthcare delivery through the Remus Telemedicine Application providing online access to medical services professionals 24/7/365.

Each “Smart Healthcare City” will serve the needs of a community of up to 1.0million patients per year. Based on the target Nation State’s existing population and forecast growth in population the number of Smart HealthCare Cities deployed will ensure sufficient capacity is built into the GNHS Programme to deal with healthcare needs for the next 50 years in the country concerned.

“By using internet connectivity, we have the ability to monitor remotely and in real-time a patient’s needs and progress, and in many cases, prevent a critical incident from occurring”

The Remus **“Doctor on Call”** telemedicine application provides online healthcare to people living in remote locations and villages who have no possibility to reach a “Smart Healthcare City” but need immediate medical help and advice. This service will provide 24/7/365 support to all registered users.

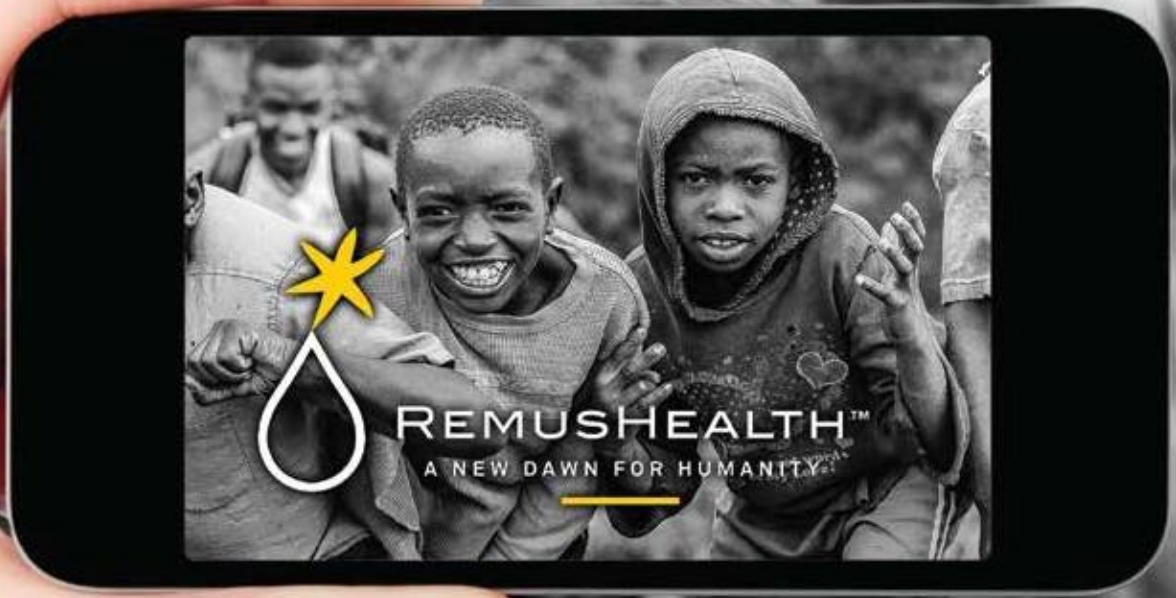

HOW WILL IT BE PAID FOR?

Remus has developed a model called “**Oil for Healthcare**” in collaboration with National Governments, whereby we develop petroleum assets in the targeted countries and utilise the significant portion of profits from the developments of these reserves to pay for the National Health Service we will deploy in-country.

- ★ 40% of the profits from minerals developed in targeted countries will be used to fund the deployment of a local National Health Service.
- ★ These profits are posted to Remus Coin – the Healthcare currency created by Remus to ensure funds are not misappropriated in anyway shape or form.
- ★ National Governments receive 20% of the mineral profits for their support to the programme.
- ★ Remus will develop a pipeline of mineral assets in each country such that the funding is always in place for at least a 15-year period ensuring the National Health Service is consistently deployed and rendered fully operational.
- ★ Remus Corporation holds over 650-man years of expertise in its senior management team in the areas of minerals development, construction and medical sciences.
- ★ Remus will establish “PPIP – Private Public Investment Partnerships

“Profits from the development of petroleum will be used to pay for the deployment and running of a local National Health Service”

HOW WILL USERS GET ACCESS?

- * Remus is proud to advise, the Programme will donate 'Remus Health Tokens' to all 'Healthcare Users' in order to pay for 'Medical Services' at each 'Remus Smart Healthcare City'
- * Their Remus Health Tokens will be stored in an Electronic Wallet accessible from a Smartphone.
- * Healthcare users will be provided with a Remus Health branded and locked Smartphone which will be used to pay for their medical services. Ease of access with maximum Two Factor Authentication security and protection against fraud.
- * All services at Remus Smart Healthcare Cities can only be paid for with Remus Health Tokens which can be additionally purchased at physical exchanges housed within the complex.

FREQUENTLY ASKED QUESTIONS

1) Why did you create a global healthcare program?

We consider it unacceptable that 40% of the world's population doesn't have the ability to access healthcare. Mortality in many developing countries is linked to treatable diseases, and through our healthcare programme we can offer healthcare users the possibility to see Doctors, Nurses and other medical services professionals when needed. The Vision statement is to make healthcare a basic human right and not a luxury item for the affluent few.

2) Why do you think your program will function?

Because our business model is a sustainable one, in which we use petroleum profits from sale of petroleum and other minerals in the targeted countries to fund the deployment of our National Healthcare Programme in those countries.

3) What's a Smart Healthcare City?

A general hospital with 350 to 400 beds, a trauma centre, an emergency response centre, an immunization clinic, accommodation for the staff, a mall with retail outlets, a hotel for visiting members of the public. In essence the Smart Healthcare City will serve local communities' healthcare needs at every level.

4) Which are the first countries you are looking to target, to deploy your Healthcare programme?

Ghana we hope will be the first country where we deploy our program, closely followed by Kenya. In both countries discussions have begun with relevant government officials with great interest shown in our "Turn Key" National Healthcare Programme. We intend to deploy the programme in more than 30 countries globally over the next 20 years.

5) How many people do you think can be treated with a single Smart Healthcare City?

We expect to treat 1 million people per year per Smart Healthcare City. Within 20 years we will reach more than 400 million people in need of healthcare.

6) What's a crypto-currency?

An alternative form of money running without a centralized banking system. Money is all about verifying balances and in and out transactions of a database account. A crypto-currency is a peer-to-peer electronic cash system where every peer has a complete history's record of all transactions and thus, of the balance of each and every account. No deleting or modification of the exchanges can therefore be made as everyone has access to it.

7) What's the difference between Remus Coin and other crypto-currencies?

The Remus Coin is non speculative and not virtual. It's the first cryptocurrency asset backed by profits from petroleum product sales. The aim of this coin is to be a tool, linking the petroleum profits of our business to our main goal: creating an innovative program for making healthcare provision sustainable and accessible.

8) Why should I invest in Remus Coins?

For 2 main reasons. Firstly, the forecast return on investment is notable compared to more traditional investments, based on the potential growth in value of the coin. Secondly, for humanitarian reasons, because our program will give healthcare access to over 400 million people.

9) What does asset backed mean?

This means our health coin will have allocated to it cash profits from our petroleum activities in each country and so carry an intrinsic value. This coin is converted into healthcare tokens and donated to healthcare users who cannot afford to pay for medicines, doctors fees and related medical services.

10) How are you going to pay for such an ambitious program?

We will use the profits made by petroleum and non oil minerals sales to create both physical units of healthcare (mobile clinics and smart healthcare cities) and a virtual platform to access medical services professionals 24/7/365, namely our telemedicine application run from mobile phones.

11) What's your organization capability in petroleum expertise?

Sath Kanagarajah, the CEO of Remus, has over 30 years experience in the Oil Industry principally in refining and marketing. Remus Corporation's senior minerals management team has over 200 man-years of proven expertise gained through extensive careers within the Major Oil Companies.
